LIFELONG RESEARCH OBJECTIVE

RESEARCH INTERESTS

My research interests center on the evaluation of large language models and their alignment with human intent. I study how model capabilities can be measured in ways that are reliable and meaningful, and how evaluation signals relate to what people actually value in model behavior. I am also interested in interpretability as a route to these questions, since understanding a model's internal mechanisms offers a basis for explaining why it behaves as it does and for aligning that behavior more deliberately.
